

## M-net opts for IPTV from ocilion: Munich network operator relies on on-premises solution

- Complete IPTV solution including 4K receivers, first and second screen apps in the design of M-net
- New IPTV platform with innovative functions and extensive content packages

Ried im Innkreis | Munich, May 26, 2021 – Bavaria’s leading fiber optic provider M-net is further developing its IPTV offering and has decided in favor of the ocilion solution. The two companies announced this in the run-up to the ANGA COM trade fair. The complete IPTV solution tailored by ocilion for M-net includes, among other things, the provision of 4K-capable IPTV receivers, first and second screen apps in the design of M-net with innovative features such as replay and Net PVR as well as extensive content packages.

As Bavaria’s leading fiber optic provider, M-net supplies not only the metropolitan areas of Munich, Augsburg and Erlangen but also many other parts of Bavaria, the greater Ulm area and the Hessian Main-Kinzig district with innovative communication technologies. Customers get everything from a single source: high-speed internet, landline telephony, mobile communications and television. In addition to traditional cable television, M-net has been offering its own IPTV product for private customers for around five years with “TVplus”. Thanks to the new partnership between M-net and the IPTV specialist ocilion, this internet-based TV connection is now being further developed and expanded with numerous features.

The high-performance fiber optic network from M-net provides the best prerequisites for implementing high-performance, cloud-based IPTV solutions such as the turnkey complete system from ocilion and making them accessible to its customers. This year they can benefit from the expansion of the “TVplus” offer and receive a full TV connection including 4K receiver, first and second screen apps, an intuitive user interface, modern Net PVR recording function and attractive channel packages from M-net.

The on-premises solution is hosted in the network and the existing infrastructure of M-net and also enables M-net to individually expand the IPTV bouquet with TV signals as required. For system adjustments and updates, ocilion has a comprehensive laboratory world in which innovations can be tested in advance before they are activated and played out for customers.

“Through the cooperation with ocilion we can take our IPTV connection TVplus to the next level and equip it with additional features such as 4K or recording in the cloud,” says Dr. Wolfgang Wallauer, division manager for private customers and the housing industry at M-net. “The on-premises solution is the best choice for this, as it enables us to combine ocilion’s TV expertise with our own high-performance fiber optic infrastructure and to offer our customers a significant leap in quality very quickly. In addition, we will also be able to provide new functions quickly and easily in the future. The ocilion platform is extremely flexible and enables us to react quickly to the future further development of TVplus based on the needs of our customers.”

Hans Kühberger, CEO ocilion: "M-net is the largest regional fiber optic player in southern Germany and therefore an important partner for us. With our on-premises solution, the provider can offer its customers a future-proof IPTV product with all facets. For M-net we implement a tailor-made package consisting of ocilion software technology, our own end devices and apps, an extensive range of content and professional services. We are very much looking forward to the joint implementation and cooperation!"

### **About Ocilion IPTV Technologies GmbH**

The IPTV specialist ocilion is developing tailor-made complete IPTV solutions since 2004 for service providers and network operators as well as for the in-house sector - from hotels to hospitals to stadiums. As leading B2B provider in German-speaking countries, ocilion provides more than 80 network operators and has realised more than 150 in-house installations. Service providers have the choice between a local installation (on-premises) and a comprehensive cloud service (hosted by ocilion) as a rental option - optimized for small and medium-sized network operators.
