

TV Fellow Web

Platform independent ocilion IPTV

TV Fellow Web is a platform-independent IPTV solution and adapted for use with browser-enabled devices. Basic functions such as live and replay TV, TV programs, recording and radio can be used directly via the web browser. The functions are embedded in an application that supports all common browsers. The tile concept of the app is based on that of the set top box solution and uses familiar interaction patterns. It is also designed according to the principles of „responsive web design“, whereby the surface adapts to the properties of the end device and browser used.

Branding

For the visibility of your brand, the app can be provided with your logo and adapted in the colors of your corporate design.

-  **User interface in your design**
-  **Recording function**
-  **Basic functions included**
